

ABSTRACT

An apparatus including a base having first and second slots and a cold storage unit placed on top of the base is disclosed. A first prong of a forklift can be inserted into the first slot and a second prong of the forklift can be inserted into the second slot and the forklift can use the first and second prongs to lift up the base and the cold storage unit. The base may have third and fourth slots. The first prong can be inserted into the third slot and the second prong can be inserted into the fourth slot in order to lift up the base and the cold storage unit. The first and second slots may be substantially perpendicular to the third and fourth slots.
